Acronyms and Abbreviations

DL	Detection limit
e.g.	<i>exempli gratia</i> (for example)
i.e.	<i>id est</i> (that is)
The Proposed Project	BURNCO Aggregate Project
UCLM	Upper confidence limit of the mean

Units of Measure

%	Percent
g/m ² /year	Gram per square metre per year
kg/m ³	Kilogram per cubic metre
m	Metre
mg/g	Milligram per gram
mg/kg	Milligram per kilogram

1.0 INTRODUCTION

This appendix summarizes the data and methods used to predict Base Case and Application Case soil concentrations from air depositional inputs for the human health multimedia risk assessment being conducted as part of the overall Environmental Assessment Certificate/Environmental Impact Assessment (hereafter referred to as the EA) for the Proposed BURNCO Aggregate project (the Proposed Project). Baseline soil chemistry data (i.e., measured concentrations in soil) are provided in Appendix 9.1-A. Screening of the predicted Application Case soil concentrations is presented in Appendix 9.1-C.

2.0 METHOD FOR PREDICTING SOIL CONCENTRATIONS

Soil concentrations were estimated using methods provided in the Human Health Risk Assessment Protocol for Hazardous Waste Combustion Facilities (US EPA 1999, 2005). The incremental change in soil concentration was calculated at the human health receptor locations selected for the Proposed Project using depositional rates for the Base Case and Application Case. The incremental change was added to the maximum measured baseline soil concentrations to predict Base Case and Application Case soil concentrations for the purposes of screening for chemicals of potential concern (COPCs)

US EPA (1999, 2005) provides the following general equation for estimating the incremental change in soil concentration that would be achieved over a specified deposition time:

$$ISC = \frac{(D_{yd} + D_{yw}) \times (1 - e^{-K_s \times tD})}{Z_s \times BD \times K_s} \times 1000 \text{ mg/g} \quad \text{Equation (1)}$$

Where:

- ISC = incremental soil concentration (mg/kg dry weight)
- D_{yd} = dry deposition rate (g/m²/year)
- D_{yw} = wet deposition rate (g/m²/year)
- tD = deposition time (year)
- Z_s = soil mixing depth (m)
- BD = bulk density (kg/m³)
- K_s = soil loss constant (year⁻¹)

Equation 1 represents a simple soil compartment model that assumes that deposition represents a mass input of substance per unit volume of soil. Equation 1 allows for loss (i.e., removal) of substances from the unit volume of soil through various processes including abiotic degradation, erosion, surface runoff, leaching and volatilization. These loss processes are chemical and site-specific, and are subject to a high degree of uncertainty. In the absence of site-specific information, US EPA (1999, 2005) assumes default values of zero (i.e., no loss) for abiotic degradation, erosion, surface runoff and leaching processes. Volatilization can be estimated for organic substances (i.e., based on chemical properties) but could also be subject to site-specific uncertainty (e.g., air temperature, soil mixing zone depth, density of soil particles, wind speed). Inorganic substances (e.g., metals) do not typically volatilize meaning that volatilization loss would be zero.

SOIL DEPOSITION MODEL

A conservative assumption of $K_s = 0$ was utilized for deposition modelling. Under this assumption, as K_s approaches zero, Equation 1 simplifies to the following:

$$ISC = \frac{(D_{yd} + D_{yw}) \times tD}{Z_s \times BD} \times 1000 \text{ mg/g} \quad \text{Equation (2)}$$

Where:

ISC	= Incremental Soil Concentration (mg/kg dry weight)
D _{yd}	= Dry Deposition Rate (g/m ² /year)
D _{yw}	= Wet Deposition Rate (g/m ² /year)
tD	= Deposition Time (25 years)
Z _s	= Soil Mixing Depth (0.2 m)
BD	= Bulk Density (1500 kg/m ³)

The assumption of no losses from soil is conservative and likely results in an overestimate of the influence of deposition on soil concentrations. However, the model recommended by US EPA (2005) is straightforward and generally accepted by regulatory agencies in the absence of more detailed site-specific information. Therefore it was considered appropriate for predicting soil concentrations for this assessment.

The substances predicted to be deposited onto soil were assumed to mix within the top 0.2 m, as recommended for tilled soils, as the root depth is assumed to equal the tilling depth (US EPA 2005). To maintain a conservative approach, the deposition time was assumed to be the full length of the Proposed Project (i.e., 18 years for construction and operations) for each of the Proposed Project phases (Base Case and Application Case).

The total, dry, and wet deposition rates for metals in the Base Case and Application Case provided by the air quality discipline are provided in Tables 9.1-D-1, 9.1-D-2 and 9.1-D-3, respectively. Methods for the prediction of aerial deposition rates are provided in the Air Quality Section (Section 5.7).

Maximum measured baseline soil concentrations are presented in Table 9.1-D-4.

SOIL DEPOSITION MODEL

Table 9.1-D-4: Maximum Measured Baseline Soil Concentrations used to Predict Base Case and Application Case Soil Concentrations

Metal	Maximum Concentration Used to Predict Base Case and Application Case Soil Concentration (mg/kg dry weight)
Aluminum	44,000
Antimony	1.14
Arsenic	15.7
Barium	217
Beryllium	0.36
Bismuth	0.29
Cadmium	0.186
Calcium	4130
Chromium	35.8
Cobalt	11.1
Copper	40.2
Iron	28,000
Lead	58.0
Lithium	16.9
Magnesium	8110
Manganese	497
Mercury	0.38
Molybdenum	0.88
Nickel	23.1
Phosphorus	853
Potassium	2320
Selenium	0.53
Silver	0.14
Sodium	590
Strontium	40.8
Thallium	0.131
Tin	2.00 ^a
Titanium	1750
Uranium	3.14
Vanadium	73.5
Zinc	63.1

3.0 PREDICTED INCREMENTAL AND APPLICATION CASE SOIL CONCENTRATIONS

Predicted incremental soil concentrations are presented in Table 9.1-D-5. The predicted incremental soil concentrations at each human health receptor location were added to the maximum measured soil concentration (Table 9.1-D-4) to calculate the predicted soil concentrations for the Base Case and Application Case. The predicted Base Case and Application Case soil concentrations are provided in Table 9.1-D-6.

4.0 CLOSURE

We trust this information is sufficient for your needs at this time. Should you have any questions or concerns, please do not hesitate to contact the undersigned at 604-296-4200.
